

Hand Gesture Recognition of Person in an Image

Group-15

K.Sai Suma

C.Varshitha

G.Aditya

- *Our aim is to find the character shown in the input image*
- *Input - Handheld images which are taken from the live webcam*
- *Output - Segmented Image and Designed Character*
- *7 different characters (A,B,I,L,V,W,Y) are distinguished which are represented using Standard American Sign language .*

Corresponding Gestures associated with Letters

Standard American Sign Language

Database Preview

Database:

- *Total number of images- 59*
- *8 complete sets (of all 7 gestures)*
- *Pictures with both dark and light background.*
- ***The images in the database are trained to find threshold values used in the code.***

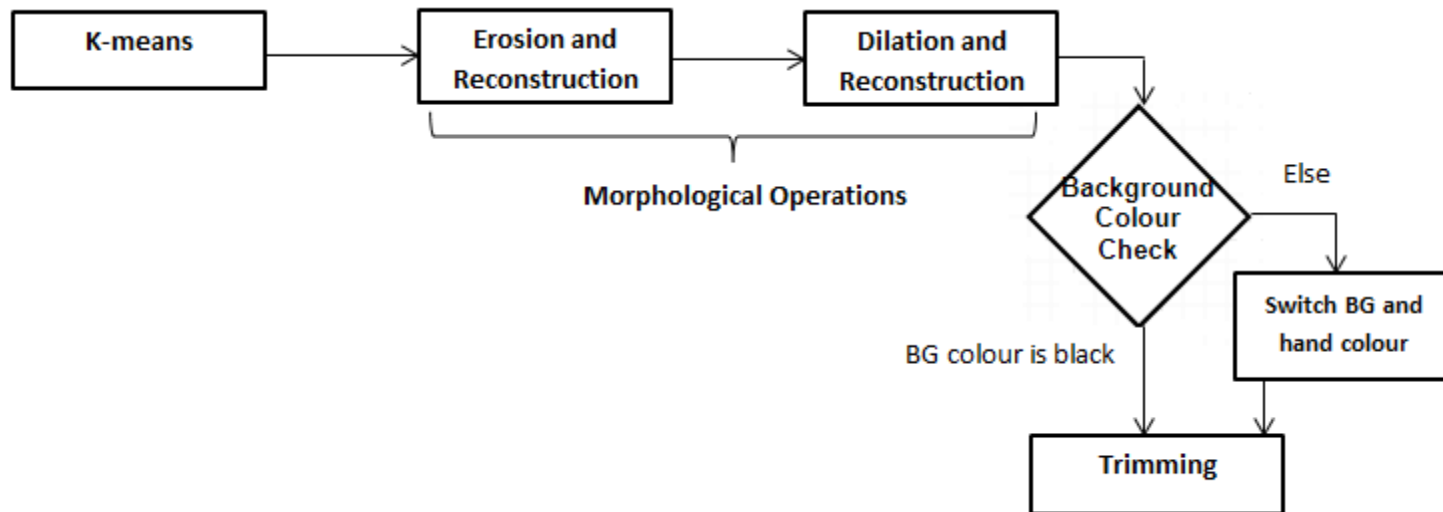

Main Steps:

- *Segmentation of Input Image*
- *Recognition of the character*

Block Diagram

Segmentation

Segmentation

k-means:

- *The input RGB image is converted to binary image.*

Morphological Operations performed:

- *Opening*
- *Closing*

Ensuring Black background and White hand (Background Check)

Trimming

operations

Recognizing Tree

Detection of Thumb

- *Detect if segmented image has thumb raised.*
- *Thumb will be detected for: L,Y*
- *Thumb wont be detected for: A,B,I,V,W*
- *Taking the right most part of segmented image and by using the threshold value We are detecting if there is a thumb.*

Detection of Fingers

- *Detecting number of fingers raised in the segmented image.*
- *Numbers of fingers raised for letters A,B,I,L,V,W,Y will be 0,0,1,1,2,3,1 respectively excluding the thumb.*
- *Taking the upper part (specific row) of segmented image and by using the threshold value we determine number of fingers raised.*

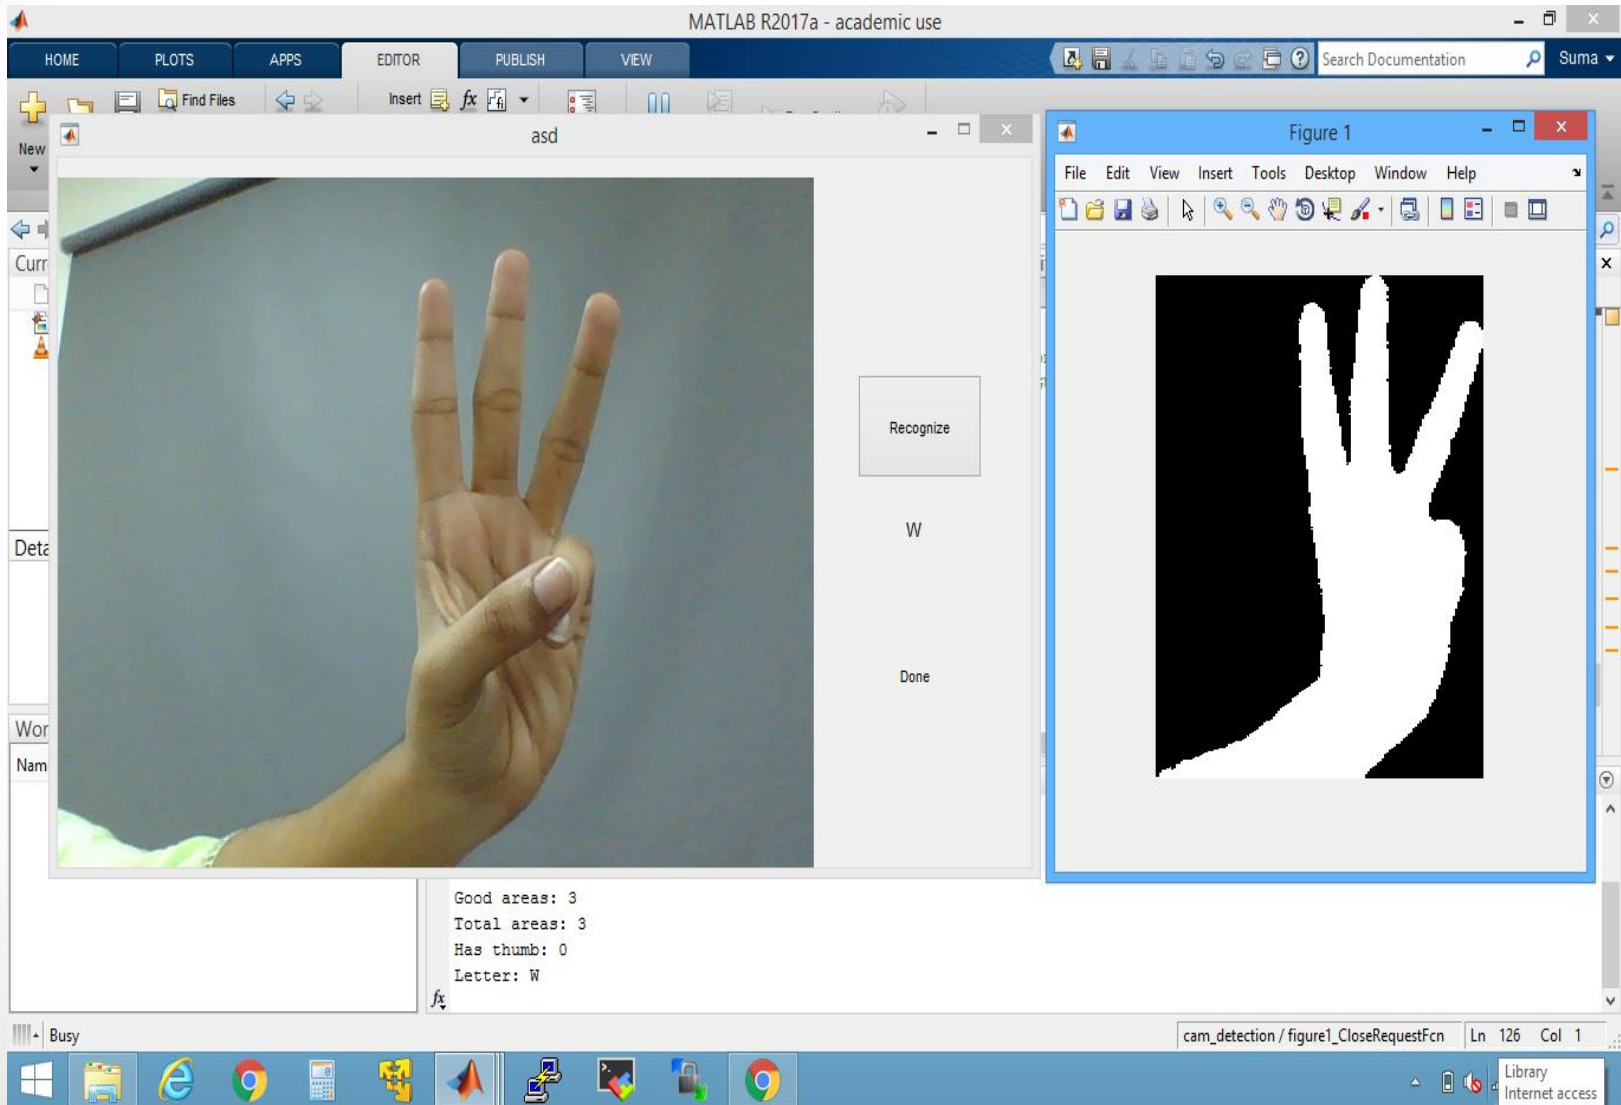

Distinguishing between A and B

- *Checking whether the hand is raised.*
- *Taking the width/height ratio of segmented image and by assuming some threshold we determine if it is A or B.*

Further Improvements

- *This project can be extended for detecting all the 26 letters in the English alphabet.*
- *And even for the numbers(0-9) in the number system using hands.*
- *The other changes that can be made are detecting the gesture when there is more background noise.*
